Internship

Lvmeng Technology Group Co., Ltd. Shanghai Branch 2025.7 – 2026.7
Intern Security Engineer

- **Secure Product Delivery and O&M:** Independently responsible for the strategic configuration and troubleshooting of firewall, WAF, RSAs and other equipment, deeply involved in financial/manufacturing customers and other security compliance projects, with solid system engineering delivery capabilities.
- **AI-enabled safe operation** • **PoC:** Actively joined the company's "Security Operations-AI Empowerment Task Force" to lead the technical research of large model-assisted alarm analysis. Build a localized rag prototype system based on LangChain, complete the security log vector storage and Prompt project debugging, output the "Application Research Report of AI in Security Log Analysis" and share it within the group.
- **Self-developed and effective tools put into production:** Independent R&D Rules Automated Inspection and Repair Tool [HOS-LS](#), submitted to the Green Alliance Engineering Delivery Tool Platform and put into internal trial; build a lightweight safety knowledge base [BOS-NI](#), integrate semantic retrieval capabilities to help new hires quickly locate frequently asked questions.

Project Experience

Security Windshield Transducer – AI + Information Security Attack and Defense Training Platform 2024.9 – 2025.6
Leader & Software Development | Won the China-US Maker Track National Award

- Lead a team of 6 people to build an integrated training platform for "Attack Simulation – Log Audit – Intelligent Response".
- **Core technology to tackle** Settings based on: **Qwen-14B** Instruction fine-tuning (LoRA), in conjunction with **Neo4j Knowledge Graph** AND: **PPO Reinforcement Learning** Optimize vulnerability exploit path recommendations; develop command-line intelligent auxiliary modules.
- **Project landing:** Design the attack log categorization and visual response module to achieve rapid traceability of abnormal behavior. Achievements: China-US Maker Country Award, soft and real review, patent writing.

Intelligent Medical Language Companion Robot – Medical AI Dialogue System 2023.9 – 2024.6
Team Member & AI Application Development | Intel AI Innovation Competition Finalist

- Develop intelligent consultation assistance robots for grassroots clinics based on the "AI PC" platform.
- **Responsible for privacy security and AI interaction:** Designed end-to-end communication encryption and sensitive content recognition mechanism (Bert fine-tuning classifier) to ensure medical data compliance; participated in speech recognition (Whisper fine-tuning) and intent understanding (LLM Few-shot) development.
- Shortlisted for the Intel Innovation and Entrepreneurship Special Competition (GBAC240303106392), highly recognized by the organizer.

Skills & Certifications

Core capabilities: AI system engineering (PyTorch/LangChain full link, rag, code generation, large model fine-tuning LoRA/ QLoRA) is parallel to AI security (offense and defense, vulnerability mining), and 168 open source PRs support the project's landing capability.

Explore orientation Cutting-edge architectures such as reinforcement learning (PPO), AI Agent development, model compression distillation, and MCP/Skills.

Other: English CET-6 | Mandarin Grade 2 B | EFG Entrepreneurship Bootcamp Completion (Issue 75) | Computer Grade 1 | C2 Driver's License

Open source contributions (all merged PR)

- ▶ **Combined** [hiyouga/LlamaFactory](#) 74,000 Stars# 10626 - Improve the Getting Started Guide document to lower the threshold for fine-tuning large models
- ▶ **Combined** [axolotl-ai-cloud/axolotl](#) 74,000 Stars# 3802 - Fix Jinja Chat Template Validation Error Prompt Logic
- ▶ **Combined** [vanhauser-thc/thc-hydra](#) 12,000 stars# 1092 Buffer Overflow | [#1091](#) Memory Leaks | etc Total 6 Consolidated Security Fixes PR
- ▶ **Combined** [aquasecurity/trivy](#) 38,000 Stars# 11013 - Fix type assertion in Alpine APKINDEX archive read
- ▶ **Combined** [zapproxy/zapproxy](#) 16,000 stars# 9411 - HashUtils Resource Leak Fix
- ▶ **Combined** [slimm609/checksec](#) 2.3k stars# 349 - Fix kernel.unprivileged_bpf_disabled detection logic

Introduce yourself

This path is not conventional, but it gives me space to grow freely - from writing technical blogs to making open source contributions, from 1,467 original articles to 168 merged PRs, I use continuous output to force myself to enter. My core direction is the intersection of AI engineering and system security: using PyTorch and LangChain to build AI prototypes from rag to code generation, and thinking about the vulnerability of the big model itself from the perspective of system security. I believe the best defense comes from a deep understanding of the attacker's mind. Now I'm looking forward to really combining the two lines to make a reliable, in-depth smart product.
